The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This clone was derived from human PAC library RPCI-4, prepared by Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu) using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994). The library is from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               VECTOR: pCYPAC2
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP4-529P3. Actual start of this
clone is at base position 1 of RP4-726N20; actual end is at 127447
                                                                                                                                                                                   Submitted (11-JAN-1999) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis, MO 63108, USA 4 (bases 1 to 127447) Waterston, R.H.

                                                                                                                                                                                                                                                                                                                                                                                         Daylor Flates, nouse, as foreston replaced gi:74136772.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using ALIas and whole genome shotgun sequencing reads assembled using ALIas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contigs scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Exic D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University denome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov or see http://genome.wustl.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTICE: This sequence may not represent the entire insert of this folone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 0); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is RP11-332C7, 200 bp overlap.
Actual start of this clone is at base position 1 of RP11-22601 actual end is at base position 172379 of RP11-22601.

NOTE: This is a 'working draft' sequence. It currently consists of 12 contigg. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
Insert size: 168721; sum-of-contigs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           'note="match to EST BM021296 (NID:g16535652) ie75d01.y1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Data from AC048378, AC025490 and AC010954 was used to finish the clone, AC093671. Single plasmid region exists between 150675 and 150731.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence was finished as follows unless otherwise noted:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Center: Washington University Genome Sequencing Center

It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q2D bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a phrap-derived quality score.

Sequencing vector: plasmid; n/a; 100% of reads Chemistry: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.990319
Consensus quality: 160248 bases at least Q40
Consensus quality: 160266 bases at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted (23-MAY-2003) NIH Intramural Sequencing Center, 8717

```

g

```
• consists of 7 configs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTICE: This sequence may not represent the entire insert of this folone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                           The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and Coworkers at the Roswell Park Cancer Institute
(http://bacpac.med.buffalo.edu)
                                                Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                VECTÖR: pBACe3.6
BIGGHORING SEQUENCE INFORMATION:
The clone sequenced to the left is AC005150, 2000 bp overlap.
Actual end of this clone is at base position 135692 of RP11-402D23.
                                                                                                                                                                                                                                                                                                                                                                 Polymorphisms have been identified between AC005150 and RP11-402D23.
                                                                                                                                                                                                                                                                                                                                                                                                                                   organism="Homo sapiens"

It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                            1 ctgtttcacataaagttttt......gccttttaggtgatgtggca 700

comprises the nucleic acid; and determining the presence or absence of an interaction between the test molecule and the nucleic acid or protein. The polymorphic variations are detected at one or more positions in the positions are in linkage disequilibrium with one or more positions in SEQ ID No. 1, or the variation is the haplotype CTTG or ATGA in ADY9428. Detecting the presence or absence of the one or more polymorphic variations comprises hybridizing an oligonuclectide to the nucleic acid sample, where the oligonuclectide hybridizes to a region cadjacent to the polymorphic variation. The proximal polymorphic variation is within a region between about 5 kb 3' of the incident polymorphic variation or variation and about 5 kb 3' of the incident polymorphic variation.

Treating melanoma in a subject alternatively comprises contacting one or more cells of a subject with a duplex RNA nucleic acid. The invention is useful for treating or preventing melanoma. The present sequence is the DNA sequence of the human BRAF gene. 146060 146180 146240 146300 146360 146420 146480 146601 TATGATAATTAGTGAAAACACCCCAAGAATGTTTTATACTTTTAAATTTTTAAAAATTGAAA 146660 ö 180 240 009 099 120 300 360 420 480 540 Sequence 190276 BP; 55599 A; 35097 C; 37143 G; 62425 T; 0 U; 12 Other; TTTTAGTGACAGTTTTAGTCATTTTCCTAATTGAAAGTATCATAAGTAATCCATAAATTT GAAAAAATGTTAACTACTCTGATAAAAAAGTTTTATAGTTTTCCTACTTTTAAGCAAAAT 14301 TCCATAGGGCMTGGTAATTGTAGTTTCAACATTACTTGCAGTTTCAGTTAGTAAATT 146421 TAATTGATTTTACCAAATTTCCATGGAACAAACAAGGTTGGCTATTTTTGGATTGATAT 541 GGAGTTTAGATAGCTAAAGTATAATTTATTTGTGATTTAATAATGGTATGGAGTTAGGC 601 TATGATAATTAGTGAAAACACCCAAGAATGTTTTATACTTTTAAAAATTTTAAAAA ATTAAGCCTAGTAAGTATAATTTAATATTGTCAAATAATTTGGAAAAATACCATGGGTACT TAATTGATTTTACCAAATTTCCATGGAACAAACAAGGTTGGCTATTTTTGGATTGATAT TITGAAATACTAGTACAGGAATATCATTGTTAGTTGAATTTTTAGCCTTAGAAAACAAAT Gaps DB 14; Length 190276; . 0 Indels Match 100.0%; Score 700; DB 14; Local Similarity 99.9%; Pred.                                                                                                                                                                                                                                                                                                                                                        63
                                                                                                                                                    Inolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition.
                                                                                                                                                                                               The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; testicular antigen; testes; cancer; metastasis; immune disorder; reproductive system disorder, urinary system disorder; gene therapy; cardiovascular disorder; respiratory disorder; neurological disorder; gastrointestinal disease; infection; cytostatic; gene; ds.

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases. WPI; 2001-541565/60

Rosen CA, Barash SC, Ruben SM

Disclosure; SEQ ID NO 11432; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating cc medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. CT the nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and other cancers of the adrenal gland, bone, bone marrow, covarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, crohn's disease, con multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing confectious diseases e.g. cerebral anoxia and epilepsy; and (f) infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

The present invention describes genes containing coding mononucleotide repeats (cMMRs). The genes are useful for the development of an antibody against MSI-H (hugh microsatellite instability) tumour. Also described:

(1) cDNA genes containing cMMRs with 10 or more nucleotide sequences, and selected from the cDNA genes having the nucleotide sequences of SEQ ID (NOS:1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41 and 43; (2) cDNA genes, which are frameshift mutated DNA deletion or insertion of one or more base in the cMNRs; (3) genomic DNA deletion or insertion of one or more base in the cMNRs; (3) genomic DNA genes containing cMNRs with 10 or more nucleotide sequences, and selected from the genomic DNA genes having the nucleotide sequences of SEQ ID (SEC) 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42 and 44; and (4) genomic DNA genes, which are frameshift mutated by deletion or insertion of one or more base in the cMNRs. The genes have cytostatic activity. The present sequence represents an MSI-H carcinoma genomic DNA sequence from the present invention.
                                                                                                                                                        ö

This invention relates to novel polynuclectides encoding human secreted proteins. Specifically, it refers to the vectors, host cells, recombinant and synthetic methods for producing human polynucleotides, polypeptides can antibodies. Furthermore, it relates to screening methods to identify agonists and antagonists that can be used to inhibit or enhance the production and function of the secreted proteins. The present invention chescribes these compositions as cancer, haematopoietic diseases including preventing disorders such as cancer, haematopoietic diseases including prostatitis and multiple myeloma, reproductive system disorders including prostatitis and inguinal hernia, musculoskeletal diseases including prostatitis and hypernatraemia, mixed fetal diseases including carrinary incontinence and renal disorders, neural of seases including allochol syndrome and bown's syndrome, excretory diseases including curinary incontinence and renal disorders, neural or sensory disease including diabetes and occupational lung disease, endocrine diseases including portal hypertension and irritable bowel syndrome and connective tissue or cipithelial diseases including scleroderma and connective tissue or cuttion through an activites such as cytostatic, antianemic, antidiabetic, antianemic, antidiabetic, antianemic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic antidiabetic antidiation of the invention, where the printed specification but has been obtained in the printed specificat
                                                                                                                                                                                                                             New isolated nucleic acids and polypeptides, useful for diagnosing, treating, preventing or ameliorating diseases or disorders e.g. cancer, anemia, arthritis, asthma, inflammatory bowel disease or Alzheimer's

RESULT 7 AAS46305 AAS46305;

The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and oncogenes bisulphite, of genes associated with tumour suppression and oncogenes by a sequence taken from 536 (actually 533 since numbers 408, 458 and sequence 500 are missing from the sequence listing) sequences (Ss) and sequences compared to the complementary to (Ss). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state and/or single nucleide polymorphisms and also to be used in an array for analysing classacs and so be used in a method for ascertaining genetic and/or proposed in a method for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The present sequence is one of the 513 genomic sequences derived from tumour suppressor genes and oncogenes. Note: The sequence deate for this parent did not form part of the printed specification, but we will appear to the present of the printed specification, but and the compared of the pr 1667 GTTATGTTGGTGTTGTATTTATTTA-TTATTTAGTATTAGGTATATTTTAAT 1725 1726 GİTATITITITITITITITITITI 1785 AİTTA TARA GALI 1785 Fragments of chemically modified genes associated with tumor suppressor genes and oncogenes, useful in designing primers and probes for analyzing diseases associated with cytosine methylation state e.g. cancer. 132 GCCATGCTGGTGCTGCACCCATTAACTCACATGAAGTTTTTTAAATTTTAGTGACA 191 1607 TATTTTAAGTTTTAGAGTATATGTGTATAATGTGTAGGTTTGTTATATGTATATGT 72 ACTITITAAGITITIAGGGTACAIGIGCAAAGIGIGCAGGITAGITACATATATATACAIGT GTTTTAGTCATTTTCCTAATTGAAAGTATCATAAGTAATCCATAAATTTTGAAAAAAATGT Gaps ä Sequence 8666 BP; 2444 A; 168 C; 1868 G; 4186 T; 0 U; 0 Other; Length 8666; tumour; CpG dinucleotide; single-nucleotide polymorphism; SNP; 0; Mismatches 324; Indels Score 106.6; DB 4; Pred. The invention relates to a nucleic acid comprising a sequence (I) of at least 18 bases in length of a segment of chemically pre-treated genomic DNA which has any one of the sequences of (ABR33919-ABR3403) or its complement. Also included are an oilgonuclectide or peptide nucleic acid (I), probes for detecting cytosine methylation or single-complement for (I), probes for detecting cytosine methylation or single-conclected polymorphisms (SNP) in (I), an array of oligomers or peptide nucleic acids for analyging diseases associated with the methylation craft ferentiation, analyging diseases associated with the methylation craft are analyging diseases associated with the methylation craft and/or epigenetic parameters, classification, differentiation, grading staging, treatment and/or diagnosis of attrocytomas, or the predisposition to astrocytomas by analysing cytosine methylations, involves obtaining a biological sample containing genomic or morethylated at the 5-position, in the genomic DNA sample, to uracil or annother base which is dissimilar to cytosine in terms of hybridisation contained behaviour. by chemical treatment and amplifying chemically pre-treated genomic DNA fragments using the array and a polymerase, where the amplificates carry a detectable label. The method further involves containing a methylation status of one or more cytosine positions, and contained are the genomic DNA is chemically treated by using a containing an experience to one or more data sets. The genomic DNA is chemically treated by using a fluctorescent label or radionuclide. Optionally, the labels of the cytosine position are single positions or missue, based on the specific genomic methylation attaus of brain cities are detectable molecule fragments having a typical mass spectrometer. The fragments of chemically contained by the amplificates are detected in a mass spectrometer. The fragments of chemically certered genomic DNA to be amplified, have a single position many detected by matrix assisted laser descorption mass spectromet

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                'EMC_Celerra_SIDS3/ptodata/2/ina/1_COMB.seq:*

Sequence 77443, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
TITLE OF INVENTION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FRASEEQ for Windows Version 4.0

SEQ ID NO 77443

LENGTH: 601

Sequence 622, Application US/09949002
| Sequence 622, Application US/09949002
| Patent No. 6900016
| GENERAL INFORMATION:
| APPLICANT: VENTER, J. Craig et al.
| TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
| TITLE OF INVENTION: MITH INFLAMMATORY AUTOIMMUE DISEASE, METHODS OF DETECTION
| TITLE OF INVENTION: AND USES THEREOF
| FILE REFERENCE: CL000790
| CURRENT APPLICATION NUMBER: US/09/949,002
| CURRENT FILING DATE: 2000-01-28
| PRIOR PAPLICATION NUMBER: 60/231,401
| PRIOR PAPLICATION OF SEQ ID NOS: 10823
| SOFTWARE: FascSEQ for Windows Version 4.0
| SEQ ID NO 622

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 703, Application US/09949002
Patent No. 6900016
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: WITH INFLAMMATORY AUTOIMMUNE DISEASE, METHODS OF DETECTION
TITLE OF INVENTION: AND USES THERBOF
TITLE OF INVENTION: AND USES THERBOF
CURRENT APPLICATION NUMBER: US/09/949,002
CURRENT FILING DATE: 2000-01-28
PRIOR APPLICATION NUMBER: 60/231,401
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 10823
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  501
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Trititatritatritatritritatritritritritriarritatritatratratac-rr

Sequence 12611, Application US/09949016

Patent No. 681239

FAPELICANT: VENTER, J. Craig et al.

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYNORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

FILE REFERENCE: CL001307

CURRENT FILING DATE: 2000-04-14

PRIOR PELICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

; Sequence 59510, Application US/09949016
; Patent No. 6812339
; GENERAL INFORMATION:
    APPLICANT: VENTER, J. Craig et al.
    TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
    TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
    TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
    CURRENT FILING DATE: 2000-04-14
    PRIOR APPLICATION NUMBER: 60/241,755
    PRIOR APPLICATION NUMBER: 60/231,768
    PRIOR FILING DATE: 2000-10-03
